What Makes SPI Different on Level 5?

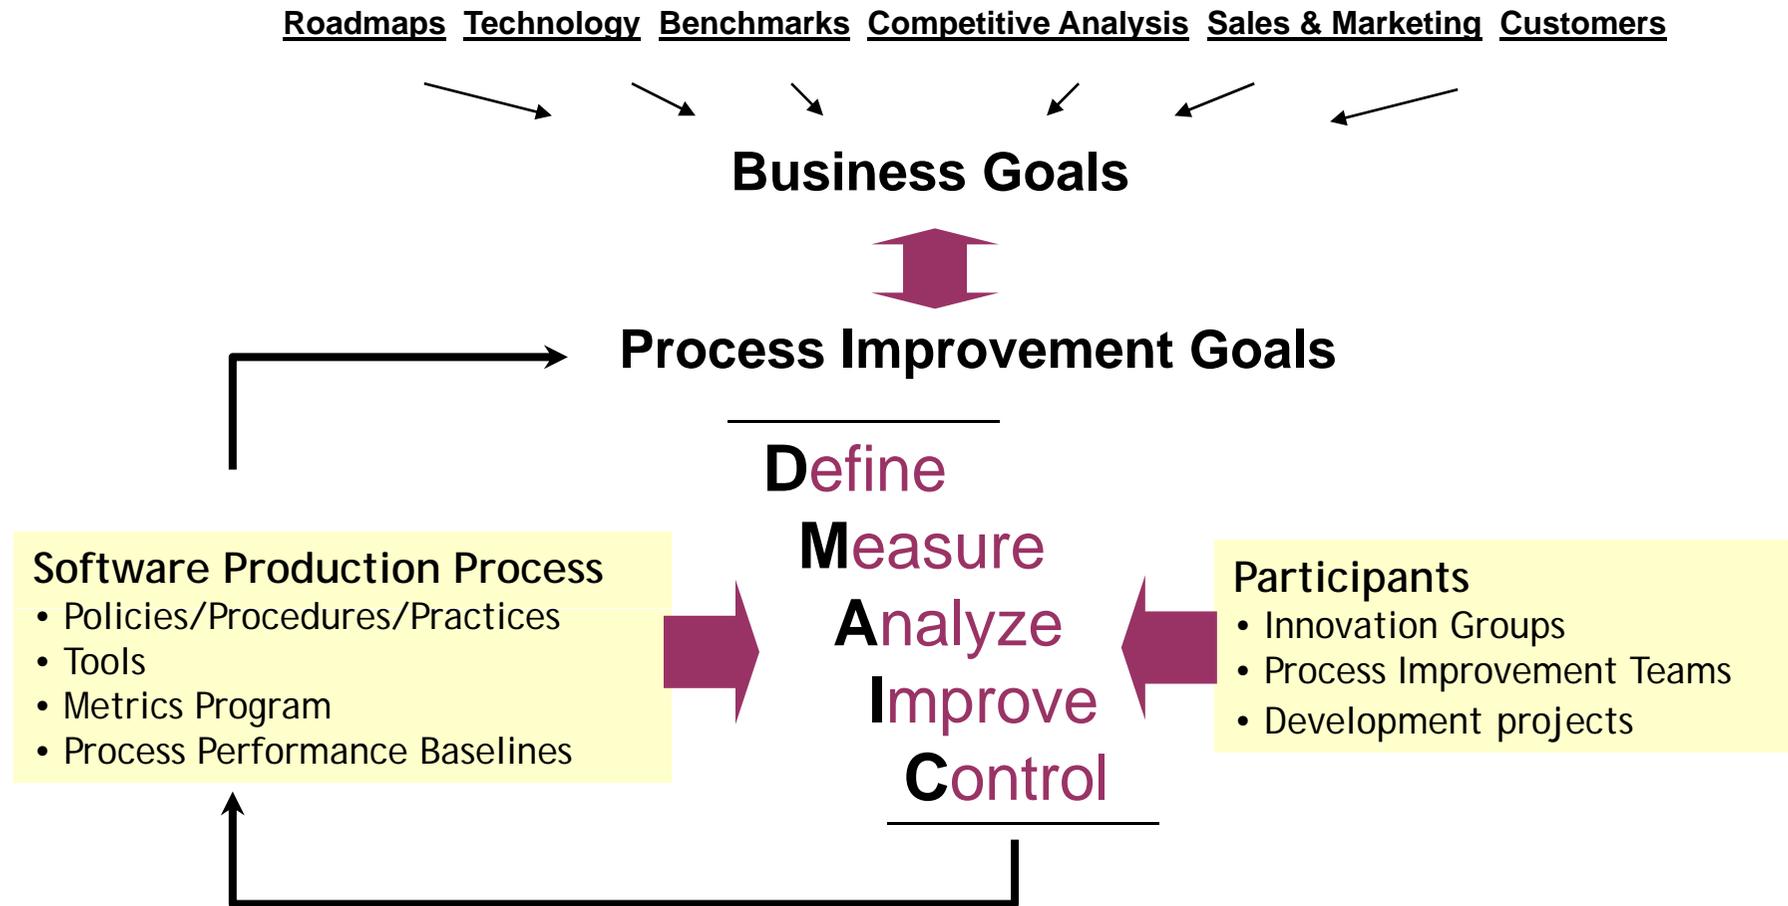

- Driven by business goals
- Quantitatively (statistically) managed
- Organization-wide
- Continuous (“Never ends”)

Process Improvement Workflow

Process Improvement in Action November 8, 2007

Digital Six Sigma Tools

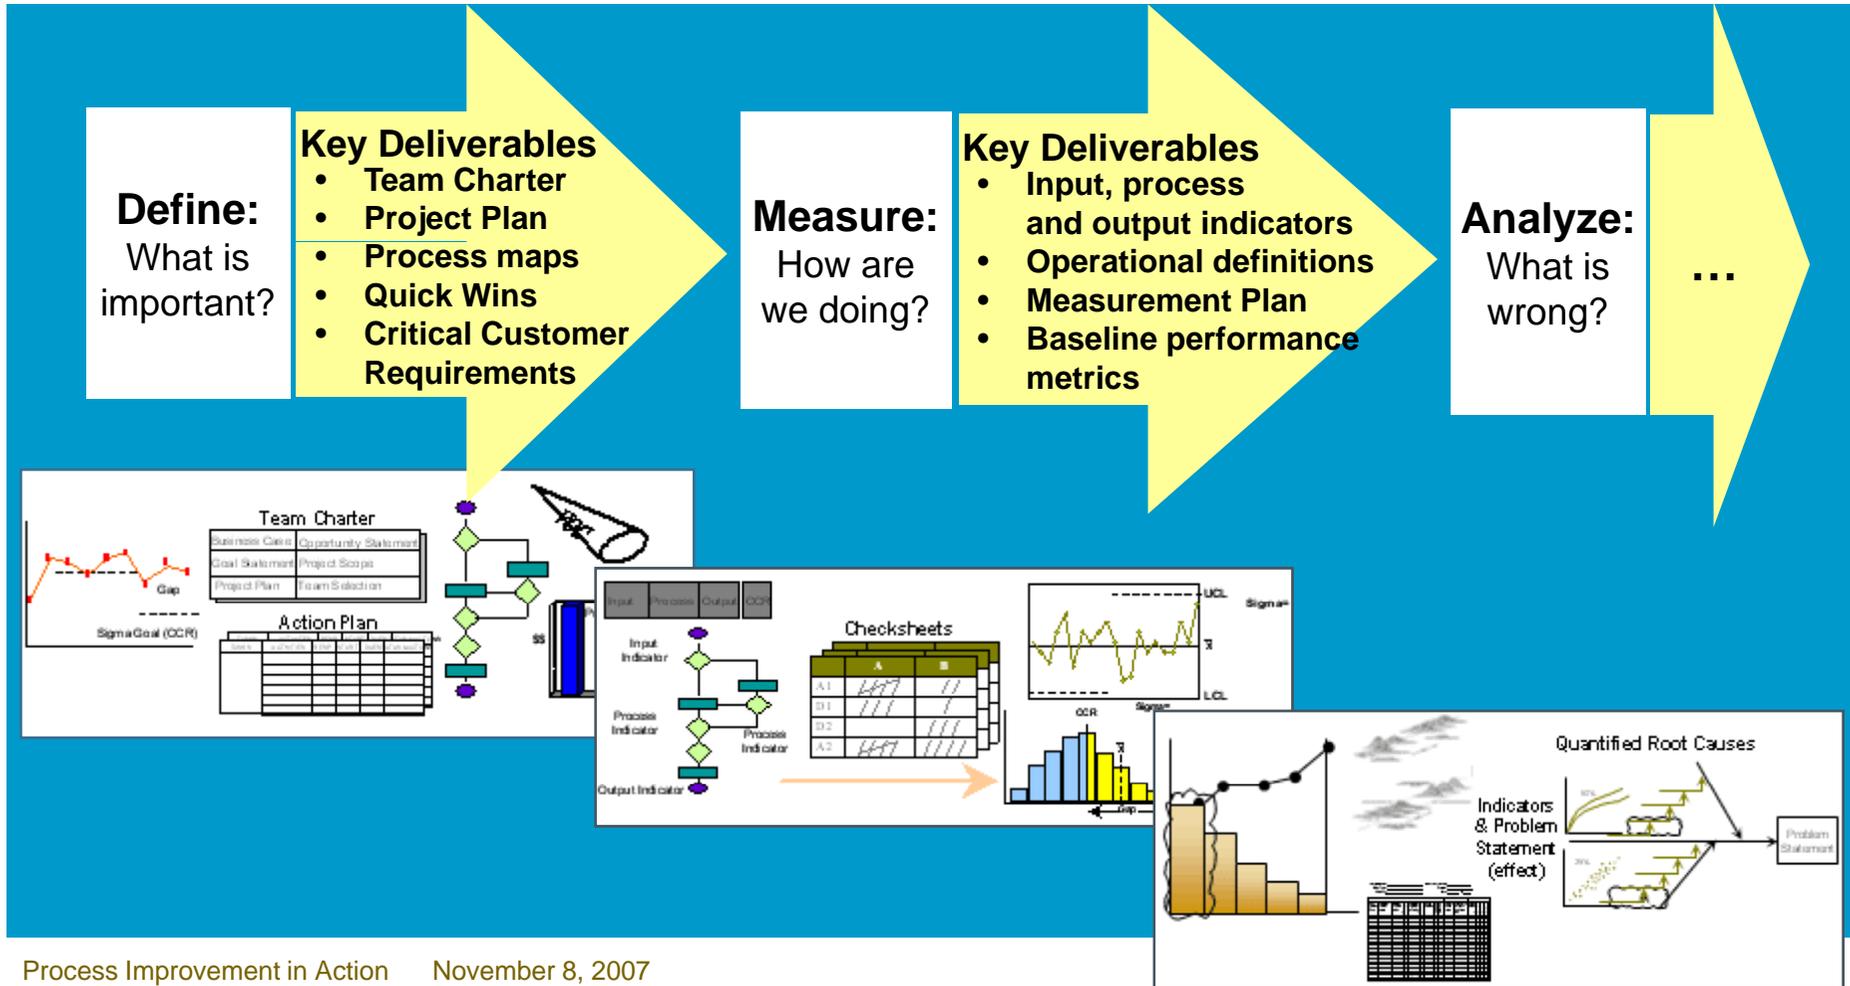

DMAIC Variation & Defect Reduction	Use to improve existing processes
DMADDD Process Efficiency & Speed	Use to drive quantum efficiency in existing operations
DMADV New Product & Process	Use for developing new processes; or radical change in process
Six Sigma for Product Development	Use to control end to end Product Management

DMAIC

Process Improvement in Action November 8, 2007

DSS Project Results

- **Cost of Quality (COQ) Improvement (2006)**

- COQ decreased by 25%
- Savings > \$250K

$$\text{COQ} = \frac{\text{Appraisal Efforts} + \text{Prevention Efforts} + \text{Failure Efforts}}{\text{Total project efforts}}$$

- **Fault Containment Improvement (2007)**

- Total Quality Gate Effectiveness (TQGE) increased by 15%
- Major Fault Effectiveness (MFC) increased by 40%

$$\text{TQGE/MFC} = \frac{\text{Errors}}{\text{Errors} + \text{Defects}}$$

Sources for SPI Proposals

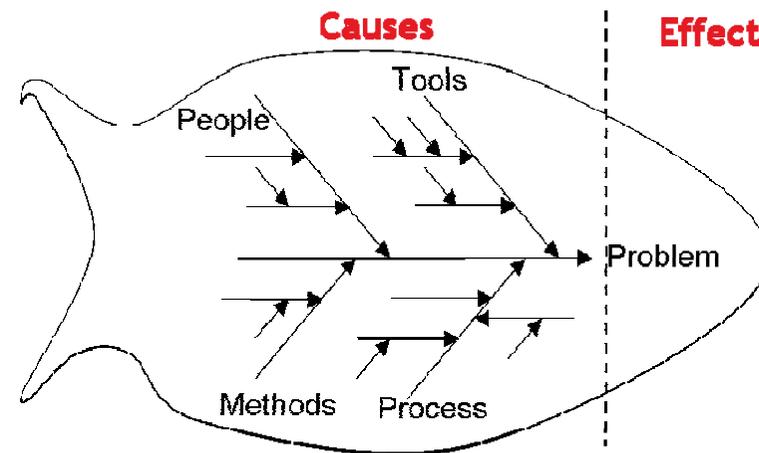

- **Assessment Findings**
- **Customer feedback analysis**
- **Project performance analysis**
- **Internal Audit findings and recommendations**
- **Analysis of process activities effectiveness**
- **Best practices and benchmarking**
- **Problem Prevention proposals**
- **Analysis of project process tailoring results**

Focusing on problem prevention

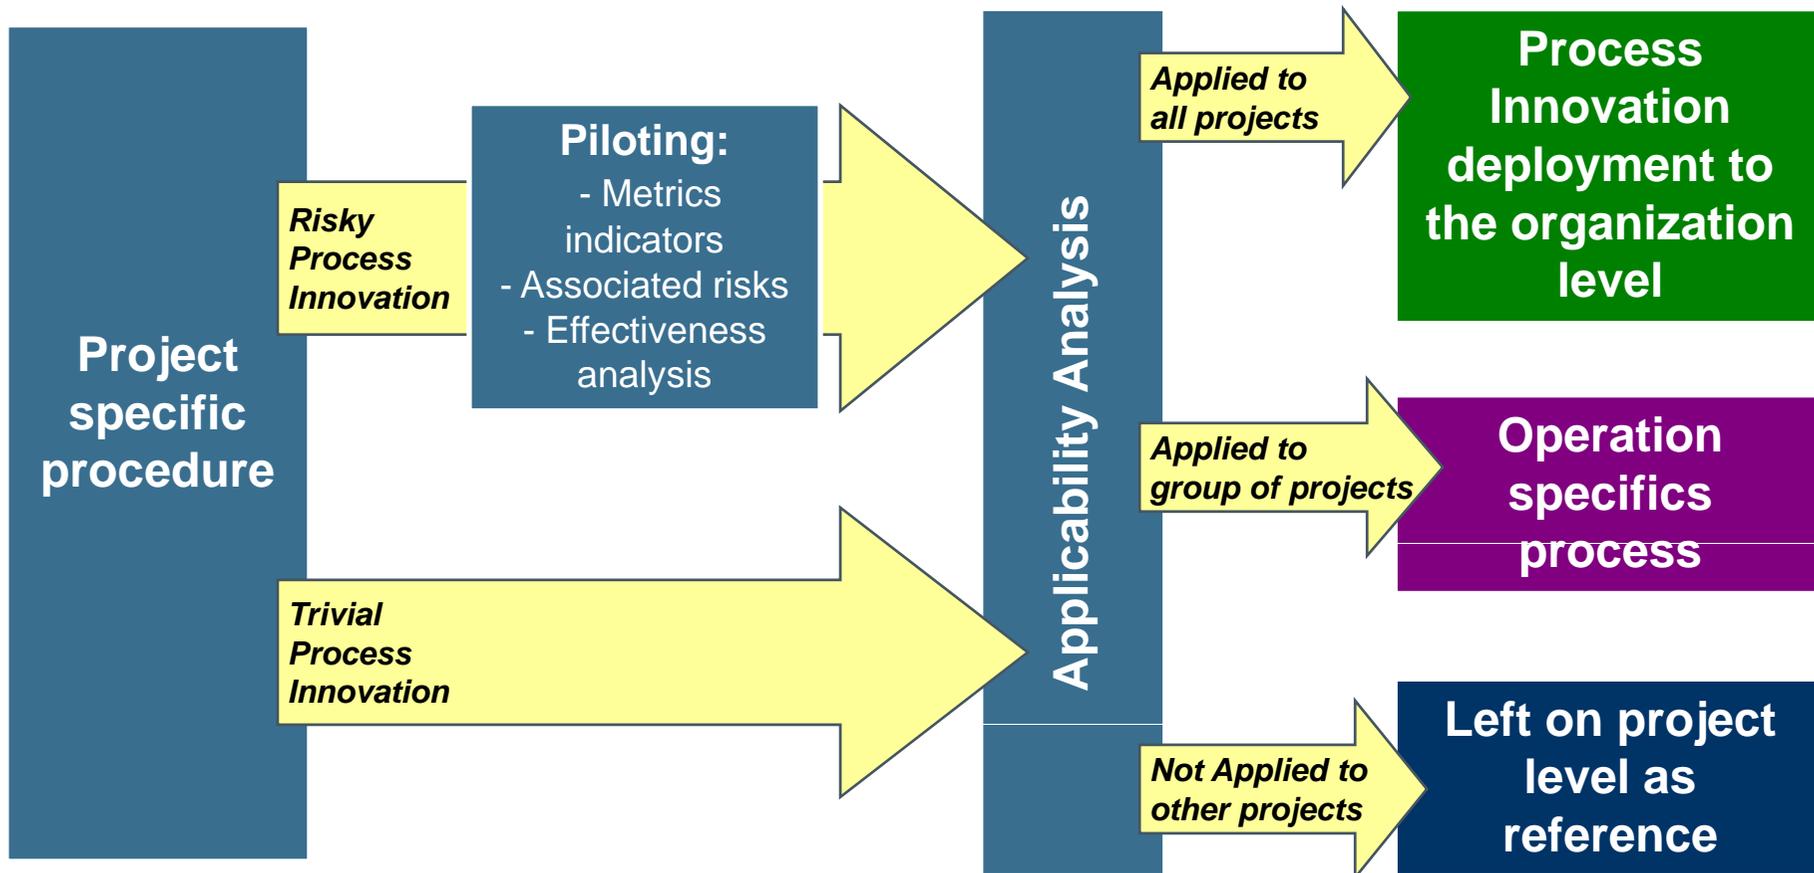

- **Proactive use of learning from past experience**
 - The earlier the cheaper
- **Problems**
 - defects
 - slippages
 - low customer satisfactions
 - process non-compliance
 - KPI downtrends
- **Use of Analytical Tools**
 - Fishbone, 5 Whys, Pareto charts

Systematic Change Management

- **Service Level Agreement (SLA) of SEPG function:**
 - 7+7 rule for analysis and assignment
 - **Severity validation:**
 - Large
 - Small
 - Cosmetic
 - **Disposition:**
 - Accept
 - Postpone
 - Reject
